Summary

Full-stack developer (Next.js, Express.js, PostgreSQL) who builds secure backends with signed sessions, role-based access, and row-locked transfers. Applied ML to NASA turbofan sensor data at C-DAC and an LLM to structure OCR text.

Education

SRM Institute of Science and Technology — Chennai, India
B.Tech, Computer Science & Engineering (AI & ML) — *May 2024 – May 2028*
CGPA: 8.92/10

Technical Skills

Languages: C++, Python, TypeScript, JavaScript, SQL, Dart
Frameworks: Next.js, React, Node.js, Express.js, Flutter, NextAuth.js, Tailwind CSS
ML & Data: Scikit-learn, TensorFlow/Keras, Pandas, NumPy, Matplotlib, Gemini API
Databases: PostgreSQL (Supabase), MongoDB (Mongoose), Cloud Firestore
Tools: Git, GitHub, Firebase, Vercel, Jupyter

Experience

AI & Machine Learning Intern — May 2026 – July 2026
Centre for Development of Advanced Computing (C-DAC) | GitHub — *Pune, India*
- Prepared NASA C-MAPSS FD001 turbofan data for Remaining Useful Life (RUL) prediction: RUL labels capped at 125, constant-sensor removal, engine-wise 80/20 split, and 30-cycle sliding windows
- Compared Linear Regression, Random Forest, and ANN baselines with Keras LSTM and GRU models; LSTM reached 12.93 RMSE on NASA's 100-engine test set (3-seed mean) vs. 13.60 GRU and 17.11 ANN

Student Intern — June 2026
IEEE EMBS Pune Chapter – National Student Internship Program | GitHub — *Remote*
- Co-developed a Flutter app with 2 teammates that scans medical documents with Google ML Kit, extracts text via OCR, and stores records in Cloud Firestore, with Firebase email and Google sign-in
- Built the OCR parser that prompts Gemini 2.5 Flash to return patient, diagnosis, and medicine fields as JSON, falling back to regex extraction of medicines, dosages, and hospital names on API failure

Full Stack Developer Intern — May 2025 – July 2025
Vital Skills, in collaboration with Techkriti, IIT Kanpur — *Remote*
- Built React interfaces for authentication, onboarding, dashboard, task assignment, workspace management, and user profiles, and integrated them with the backend team's REST APIs

Projects

Unified Banking System | *Next.js, TypeScript, Express.js, PostgreSQL (Supabase)* | Live Demo | GitHub
- Built a full-stack banking platform with a Next.js frontend and an Express.js REST API (28 endpoints) over a 13-table PostgreSQL schema, covering accounts, transfers, scheduled payments, loans, and credit cards
- Secured sessions with HMAC-SHA256-signed cookies (timing-safe verification, 8-hour expiry) and bcrypt password hashing; enforced role-based access for customer, employee, and admin users
- Made transfers atomic with PostgreSQL transactions and SELECT FOR UPDATE row locks, required a single-use OTP with a 5-minute expiry, and flagged transfers above 3× the account's average

SynergyHub | *Next.js, TypeScript, MongoDB, NextAuth.js* | Live Demo | GitHub
- Co-developed a team-formation platform with 1 other developer; built Google OAuth and credential sign-in (NextAuth.js, bcrypt), the user and project APIs, and connection-request and direct-messaging features
- Integrated the Gemini API to score user-to-user matches as structured JSON, then replaced it with deterministic skill-overlap scoring (skills, availability, experience level) to remove API costs

Certifications

- AWS Certified AI Practitioner (Credential) | Microsoft Certified: Azure Data Fundamentals, DP-900 (Credential)
- SAP Certified – Data Analyst – SAP Analytics Cloud (Credential)

Publications

- *Phishing Website Detection Using Attention-Based Deep Neural Networks for Secure Cyber Systems* – ICAIN 2025, Springer LNNS – 2026 (co-author, presenter) | DOI
